

Announcement

Northville, Michigan

2019.10.10

Contact: Julius J. Rim, Ph.D. President of IMET,Ltd e: dieseltrap@gmail.com 248-765-7747

Subject: Rim's Invention was chosen as one of the final inventions of the 2019 International Invention Fair to be held at KDJ Convention Center in Gwangju, Korea, (Nov 6-8)

Recently, Battery-Electric Vehicles(EV) are getting popular , because of cheaper fuel(electricity) cost and zero-emission characteristics. To our pleasant surprises, Rim's invention, the GREENPOWER™(GP) "H-EGR" Muffler kit can save fuel cost by 16-24% by adding water into our GP-Muffler heat exchanger.

Inventor Rim claims that the commercialization of his technology for all trucks in California and other states in the USA can meet the US-Phase-2 Climate Change or Carbon-pollution regulation, today.

IMET, Ltd announced the GP™ Muffler Retrofit Kit-Model VM1 for Semi-trucks and School Buses are available for sale from January, 2020. The cost is expected at 1/40th of EV-Truck and EV-School buses.

(GP-Muffler Brochure is available upon request)
