

Inventor Julius Rim's Message to US Congresswoman Haley Stevens

Meeting in Northville Library, Michigan on Feb.11 2020

- All Americans want to save fuel-costs for their cars-trucks.  
For example, after Tesla's statement that its Electric-Semi can save 50% of fuel (electricity) cost compared to diesel-semi, its stock price jumped by 321% as of Feb 3, 2020.
- Both Electric Vehicles and President Obama's Climate rule (US-Phase 2- fuel economy increase) that applies to new trucks only, are taking too much time for the USA.
- Rim's invention, the GreenPower™ Muffler retrofit kit, can help for all in-use trucks and cars to save fuel cost and begin to fight for Climate Change Crisis, immediately.
- Inventor Rim requests the US Congress modify the US-Phase 2 rule to include in-use or old trucks as well.
- Rim's technology should be commercialized in the USA to save fuel-cost of \$170 billion and reduce 1 billion tons of CO2 gas starting from 2020. It is possible because it is based on a sound theory of thermodynamics.
